PROFESSIONAL SUMMARY

QA engineer specialising in testing AI systems, with 4 years across AI, healthcare (HIPAA), and EdTech products, spent entirely on US-headquartered distributed teams. Currently sole QA at an AI startup with final release sign-off on three production AI products, where I build the evaluation tooling for LLM features that defeat standard assertions: golden datasets, repeat-run consistency measurement, and rule-based, semantic-overlap and LLM-as-judge scorers. Also own the Playwright suite and API testing.

CORE SKILLS

AI Testing	LLM output validation, golden/ground-truth datasets, prompt-drift regression, hallucination and consistency checks, custom scorer frameworks (rule-based, semantic-overlap, LLM-as-judge), adversarial red-teaming mapped to the OWASP LLM Top 10 (promptfoo)
AI Tooling	Claude Code daily for test generation from specs, synthetic test data, and failure triage; author of an MCP server and Claude Code skill (see Projects)
Automation Languages	Playwright (TypeScript), Cypress, Selenium with Appium, JMeter
API Testing	TypeScript, JavaScript, Python
CI/CD & Tools	Postman, REST APIs, SSE/streaming response validation
Practices	GitHub Actions, Git, LogRocket session-replay debugging
	Agile/Scrum, exploratory testing, regression, performance & load testing, defect management

WORK EXPERIENCE

QIU.ai Software Quality Assurance Engineer	Nov 2024 - Present Islamabad
- Sole QA engineer with final release sign-off across three production AI products: an AI people-search platform, a meeting transcription tool (Meet/Zoom/Teams bots), and a virtual-office collaboration app - Built the LLM evaluation practice from nothing: golden dataset plus repeat-run methodology that exposed non-reproducible AI search output (same query, 4x result swings), making model regressions measurable and testable for the first time - Found and documented 80+ defects, including a P0 where the flagship AI search silently returned 0 results against 329 on the identical query; findings drove a pipeline rebuild in which 20+ fixes were verified against my test plan - Replaced over a day of manual regression per release with 130+ Playwright/TypeScript tests across 60+ specs with CI smoke gates, sustaining a biweekly cadence across three products as a one-person QA function - Triage production issues from LogRocket session replays into reproducible bug reports; API and streaming (SSE) testing via Postman	
OneScreen Software Quality Assurance Engineer	Sep 2023 - Oct 2024 Islamabad
- Tested 6+ EdTech products (QuizWiz, GURU, Hype, LearningHub, Scribe, Beacon) across web, Android touch-screens, and mobile - Designed and executed functional, regression, and performance test suites, reducing escaped defects by 30%; introduced automation tooling that cut regression testing time by 40%	
CareCloud Junior Software QA Engineer	Oct 2022 - Sep 2023 Islamabad
- Tested EHR and medical billing software (TalkEHR, TherapyEHR, Fox) under HIPAA compliance; 99% defect-free releases - Logged, tracked, and verified 500+ defects; automated 80% of assigned regression cases in Cypress (JavaScript)	
Maven Logix / Fusion Logix Android Developer; Software QA Intern	2020 - 2021 Islamabad
Built and debugged Android applications (Java), a developer background that informs white-box test design; earlier, bug reporting and defect tracking while helping define QA standards and release processes	

OPEN-SOURCE PROJECTS

QA Portfolio	github.com/zarashafiq/qa-portfolio
- LLM evaluation framework with three scorer families (rule-based, reference-overlap, LLM-as-judge with injected model for zero-cost CI) and a deliberate known-failure case proving the checks catch real regressions - Adversarial red-team suite mapped to the OWASP LLM Top 10: multi-turn attack sequences, canary-based prompt-leak detection, and a planted vulnerability asserted to breach; gates CI, with promptfoo covering the same categories against live models - Playwright suite covering multi-user isolation, boundary-value analysis, and CDP network throttling; GitHub Actions matrix across 3 browsers plus API contract tests	
Playwright Flake Triage	github.com/zarashafiq/playwright-flake-triage
CLI, MCP server, and Claude Code skill that group Playwright failures by normalised signature and classify root cause across 9 categories, separating test debt from genuine product defects	

EDUCATION

MSc Computer Software Engineering	CGPA 3.80
National University of Sciences and Technology (NUST) 2021 - 2024	
BSc Computer Software Engineering	
Fatima Jinnah Women University 2017 - 2021	

CERTIFICATIONS & TESTS

IELTS Academic:	Overall 8.0 (Listening 8.5, Reading 8.5, Writing 7.0, Speaking 8.0)
